GUESTROOM WINDOWS

An inside mount blackout roller shade closest to the window with fascia. Installation to include side channels on the roller shade to prevent light penetration. On top of that, closet to the room, is a ceiling mounted 120% full rufflefold sheer on commercial rod with clear batons. ADA rooms get hoop batons on sheers and the roller shade is motorized!

Please note this is sometimes reversed with sheer shade in the window with a blackout drape over it.

PUBLIC SPACE & BOH WINDOW COVERINGS

How easy can it get! Roller shades in lobby/dining, vestibule, fitness, halls and BOH. In the meeting room dual roller shades with a blackout shade under a sheer roller shade.
